

PRESS RELEASE

Esker Connectivity Suite Adds Business Document Management to and from SAP Applications

SAP Connectivity Suite provides robust and versatile integration between Esker DeliveryWare and SAP applications.

Sydney –**May 23, 2005**—Esker Software, the leader in SAP document delivery solutions, has announced the new release of its SAP Connectivity Suite, providing superior integration between SAP applications and Esker DeliveryWare, its flagship document delivery server. This solution brings together four powerful components offering more flexibility than any other document delivery solution available in the SAP space.

SAP Connectivity Suite combines:

1. SAPconnect – the traditional interface for fax, email and wireless message communications from SAP applications.
2. SAP print interface – provides full routing of documents directly from SAP applications into Esker DeliveryWare, as well as full status of delivered jobs back into the SAP system.
3. SAP directory interfaces – allows the Esker DeliveryWare Rules Engine to lookup business partner delivery information in the SAP Vendor Master and Customer Master records.
4. SAP integration interfaces – allows industry-standard data to be passed in and out of SAP applications, including data “extracted” from scanned, faxed, and printed documents. Supported formats include EDI, SAP IDoc, SQL query/publish, and XML.

“Esker SAP Connectivity Suite is unique in the market place, offering a solution of unrivaled flexibility that brings document delivery to the fingertips of SAP customers via SAP standard integration interfaces,” says James Elkington, Managing Director, Esker Software Australasia. “The solution is easy to install and configure, and can be directly monitored in SAP interfaces,” adds Elkington.

“We have consulted with Esker in the development of this advanced SAP Connectivity Suite for Esker DeliveryWare,” says Mike Bell, VP and General Manager for the SAP practice of RJT Compuquest, an Esker Certified Partner and SAP Solution Provider. “Esker has built this based on what SAP customers are telling us they need, and we’re pleased to be in on the ground floor of deploying it.” (Is there a local equivalent that we can use?)

“We are constantly investigating new integration technologies to maximise SAP delivery options,” says Mitch Baxter, Executive Vice President of Business Development at Esker Software. “With automated document flow to and from SAP solutions resting at the heart of our strategy, we continue to develop and improve performance so our customers can benefit from faster, more reliable communication.”

Esker concentrates on document delivery solutions for SAP customers. This release unleashes even more powerful capabilities, cementing Esker’s lead in the SAP document delivery space.
